

If you've come up with an invention or innovation in the area of clean technology, and if you are more concerned with impact on people and the planet, than on financial reward, then we may be able to help you.

We are interested in ideas that provide renewable energy, reduce emissions, clean water, reduce waste and pollution, increase food production sustainably. We are especially looking for ideas that help people raise themselves out of poverty.

First please read our [Innovator Guidelines](#) for the kind of ideas we work with, and then you can [contact us](#) .
